

## General information

Location: Uruguay

Purpose: Railway bridges

Date of completion: 2019 - 2020

Client: "Vía Central" Partnership (Sacyr, Saceem, Berkes, NGE)

Final Client: MTOP

Structural system: Steel structures, stone masonry, reinforced concrete

Scope of work: Inspection, structural vulnerability assessment, project for the strengthening and structural repair or design of new bridges

## Description

This project represents a milestone in the development of Uruguay's logistic platform, and will allow the traffic of heavier cargo at higher speed.

RDA is developing the rehabilitation and structural strengthening or new bridges projects for the 71 pre-existing structures of the central railway branch. The project extension is 170 mi, from Montevideo's port to Paso de los Toros city.

The scope of work includes from preliminary stages of inspection and diagnosis to the construction project design.
