

PROJECT

Agro-industrial complex for rice production

LOCATION

Rocha, Uruguay

INFORMATION

Area: Industrial infrastructures
Market: Industrial complex
Year of completion: 2017
Final client: Inversul S.A.
Our work: Preliminary design and alternatives analysis study

DESCRIPTION

Agridiamond is a Uruguayan company dedicated to agriculture, specialized in the production of rice. Due to its geographical location, its new plant was challenging when it comes to road design and drainage. The project was designed to prevent the effect of frequent floods happening in the area, making sure it would not affect the production.

SOLUTION

For this project, we carried out a technical study of the different possible locations for the complex, designed the distribution systems for the necessary facilities, and developed the earthworks design, roadways, and drainage system.
