

PROJECTS

## Warehouses and storage facilities

DESCRIPTION

At RDA Engineering we have completed different warehousing projects, including aircraft hangars for airports, industrial plants and warehouses, hypermarket roofs, transport stations and logistic centres, among others.

We participate in every stage of the projects: from conceptual design of a solution that best meets the customer's needs, geometrical fit with BIM technology to facilitate the communication at early stages, detailed engineering considering construction procedures and local costs. We work hard to provide cost effective solutions, fully optimizing our designs.

We have worked in many projects of different magnitudes, some of them with more than 100 ft. of clear spans, maximizing the interior space and optimizing the use of the warehouses.
