

PROJECT

New Bridges

DESCRIPTION

At RDA Engineering, we have undertaken numerous Detailed Design Projects for newly constructed bridge structures. Our involvement spans every phase of the project, from the basic design for bidding purposes to the detailed design plan, and we provide support throughout the construction stages. Our approach centers on addressing our clients' needs to achieve optimal solutions for each challenge. We have successfully designed various types of bridges with different materials, for diverse markets and project modalities.

SOLUTION

Solutions for this type of project are highly diverse and align with operational requirements outlined in specifications, as well as environmental and site-specific needs. The constructive benefits of each solution are thoroughly evaluated, taking into account the construction feasibility for each location. This process is carried out in close collaboration with the client.
