

PROJECT

Los Meandros wind farm

LOCATION

Neuquén, Argentina

INFORMATION

Area: Industrial infrastructures
Market: Wind farm
Year of completion: 2018
In collaboration with: Esteyco
Contractor: Milicic/Ingener
Final client: Ente Provincial de Energía del Neuquén (EPEN)/Envision Energy
Our work: Detailed design

DESCRIPTION

Los Meandros, a wind farm located in southern Argentina, is one of the most ambitious projects in the region in recent years. Its goal is to supply sustainable energy to 300,000 homes. The volume and impact of the project imply challenges both at an environmental level and in construction efficiency and functionality.

SOLUTION

We carried out the detailed design of civil works, including the layout of new roads and the modeling of the platforms required for the assembly and stockpiling of components for each of the 50 wind turbines.

OUR QUALITY TURN

A critical aspect of the project was the optimization of the earth moving, so we had to take into account the design of the longitudinal drains, culverts, and speed bumps.
